Solar Analysis, Building Placement

Graph diagram

Solar Analysis, Building Placement

Overall View

TOWER POSITIONING ON SITE
created by designtech.io for Autodesk

Solar Analysis, Building Placement

Dynamo graph notes and color key

TOWER POSITIONING ON SITE created by designtech.io for Autodesk

NOTES

This graph is meant to be used with Dynamo Refinery in "Optimize" mode only. Internet access is REQUIRED for this graph to run properly.

PACKAGES

- Solar Analysis for Dynamo, v1.2.2

DESCRIPTION

Starting from the Tower selected on the previous workflow, the graph will iterate to find the best position within the site boundaries, taking into account the Solar Incidence and total Glazing of the building.

To avoid options that don't comply (outside of site boundary), the results are heavily penalized, saving computational time by making the analysis fail on purpose.

AUTHOR

COPYRIGHT: 2019 designtech.io All rights reserved

COMPANY: created by designtech.io for Autodesk

INSTRUCTIONS

- 1) Set the Manual Inputs:
 - a) Select surrounding buildings.
 - b) Select building mass to analyze from previous workflow.
 - c) Select site boundary model lines.
 - d) Set average floor to floor height in millimeters.
 - e) Define site coordinates (latitude and longitude).
- 2) Open Dynamo Refinery (View > Refinery...)
- 3) Create a New Study
- 4) Under generation method select Optimize
- 5) Under Inputs, all inputs should be selected.
- 6) On the outputs tab:
 - a) [OUT] Area Out - Set to Minimize
 - b) [OUT] Free Area - Set to Maximize
 - c) [OUT] Incidence/Area - Set to Minimize.
 - d) [OUT] Total Glazing Area - Set to Maximize.
- 7) Fix any possible problems on the issues section
- 8) Click generate and wait for the outputs

KNOWN ISSUES

- 1) Performing the Solar Analysis can take a while as it depends on a web service to calculate and return the response.

Write Input and Output Notes for Python Scripts and group the note with the Python Script node.

Note: Node contains boilerplate code for use in projects.

INPUTS

IN[0] = Walls
IN[1] = Height

OUTPUT

OUT = Data

GUIDELINES

Read the instructions.

Add Notes (Ctrl + W) and Comments to the graph.

Use the Cleanup Node Layout command (Ctrl + L) on the graph and inside Groups to enhance legibility.

Use Node Groups and the Standard Color Coding.

Rename Nodes: <OriginalName> || <Description>.
